

Ability Tec: a new name in contract electronics manufacture

Ability Tec is a new and unique business - high quality PCB and contract electronics manufacture and testing, delivering social benefits from a motivated workforce in highly automated cost efficient plant.

We offer full material procurement / supply chain management, complete PCB assembly and test, system build, prototyping, design for manufacture, design for procurement, test strategy development, packaging and distribution.

Ability Tec is a high quality contract electronics manufacturer with production capabilities based on the latest manufacturing assets and inspection equipment.

Our Bolton factory operates a modern in-line SMT and conventional manufacturing facility and our services include:

- **Low, medium and high volume capability**
- **Single to multi-layered boards**
- **Lead-free processes**
- **0201 to 0.012" XFP**
- **1 to 2000 comps. per board/biscuit**
- **BGA placement, inspection and rework**
- **Analogue, digital, RF and mixed designs**
- **Single and double side assemblies**
- **Intrusive re-flow and selective wave solder**
- **No clean process and cleaning processor**
- **Design for manufacturing**

The advantage to you is that we are a lean, highly commercial business that has been born out of the former Remploy Electronics factory in Bolton, meaning that our assets and people have enjoyed high level of Government backed investment in plant and training.

We are unique in that 75% of our workforce is disabled and as a social enterprise we re-invest profits in our staff and our business, no profits go to shareholders.

That shouldn't be the only reason to consider working with us – being competitive on quality, price and service is your priority and ours, but the social benefits you would create through your order is a tangible benefit that comes at no cost to you.
